- Vinyl Steam Seal (Optional)

Kwikstal

FRAMING SYSTEM

The Kwikstal system of bath enclosures offers choices, versatility, and advantages for dealers, installers, and home owners alike.

FOR DEALERS:

The Kwikstal system is "inventory friendly". By stocking basic Kwikstal components, you have on hand the nec-

essary materials to fabricate enclosures for most standard and custom configurations - - quickly and economically! This versatility provides dealers a great solution for the broad range of bath configurations found in today's homes. Built to be a vital part of a home's living area, today's baths are designed with character and style. Gone are the days of a shower being a simple, standard sized, single door opening. The Kwikstal system offers a perfect solution for applications requiring unusual sizes, angles, and buttresses.

Semi-Frameless Kwikstal

STYLE SERIES - 1/4" (3/16" Option)

- 1/4" Safety tempered glass with brilliant polished edges. Option: 3/16" Glass.
- Semi-frameless design with only hinge channel framing on door panel. Option: Aluminum bottom channel.
- Highly buffed, premium weight aluminum framing
- Low profile, easy-to-clean sill on single swing doors; Standard sill on door and panel combinations
- Continuous, concealed hinge with stainless steel pins
- Clear vinyl drip rail and sweep; removable for easy cleaning. Option: Aluminum drip rail with drip collector and vinyl sweep. For use with optional aluminum bottom channel.
- May be installed to hinge from left or right to accommodate either application need
- Designed with a built-in "open door" stop at 100°
- Clear vinyl glazing
- Magnetic closure
- Fully anodized magnetic handle which mounts over the edge of glass (MAG) Option: MAD - Fully anodized magnetic handle with double magnets which mounts over the edge of glass
- Vinyl Steam Seal (optional) converts standard unit to steam

■ 1/4" Glass
 ■ Low Profile Sill (Used on Single Swing Doors)

■ Frameless Vinyl Drip Rail

■ Magnetic Pull Handle (MAG)

■ Vinyl Steam Seal (Optional)

FOR INSTALLERS:

Kwikstal enclosures are made up of components assembled in a simple piece-by-piece, building block process. This process is repeated with similar components for most all configurations, making installation simple and predictable, even for challenging applications. Once familiar with the Kwikstal method, most installers prefer it to that of traditional double framed systems.

FOR HOMEOWNERS:

For homeowners the appeal is obvious! The flush glazing system utilized with Kwikstal components results in a "less metal - - more glass" look that meets the aesthetic demands of today's homeowners.

Kwikstal doors are available in framed, frameless and semi-frameless series, each designed to work in conjunction with any Kwikstal frame kit. With Kwikstal your options are nearly endless!
